## WHY CHOOSE US?

Our team of experts will conduct a thorough audit of your property or facility. They will examine all aspects of your fire safety system and identify any potential issues or deficiencies before recommending changes that can help improve your overall fire safety systems and minimize the risk of a fire occurring at your property or facility.

This will help ensure that you are fully compliant with all local laws regarding fire safety regulations as well as international standards for preventing fires from spreading quickly throughout buildings where people live or work together regularly.

Our team comprises in-house certified professionals, ensuring the highest standards of safety, compliance, and proficiency in every assessment we undertake. We extend our services to multiple sites, catering to PAN India locations and beyond, ensuring top-tier safety standards worldwide.

## ONE STOP SOLUTION

# OUR SERVICES

## FIRE EXTINGUISHER

A fire extinguisher is a device designed to control fires and may help to extinguish them. Fire extinguishers come in different sizes, with some being portable and operable on land. They are available in various types, including ABC, DCP, CO2, Water CO2, Mechanical Foam, and Clean Agent, each with its unique features and uses.

## FIRE HYDRANT SYSTEM

Fire Hydrant Protection System is designed to fight of fire & protection of fire, proportions, in all classes of risks, and it is an active fire protection measure. It is designed to provide rapid access to water if a fire breaks out. Fire hydrant installation consists of a system of pipe work connected directly to the water supply main to provide water to every hydrant outlet and is intended to provide water for the firemen to fight a fire. The water is discharged into the fire engine form which it is then pumped and sprayed over fire. Where the water supply is not reliable or inadequate, hydrant pumps should be provided to pressurize the fire mains. The Hydrant system was installed at the centre in the year January,2021.

## FIRE SPRINKLER SYSTEM

A fire sprinkler system is an active fire protection measure, consisting of a water supply system, providing adequate pressure and flow rate to a water distribution piping system, onto which fire sprinklers are connected.

Fire Sprinkler Systems have been the biggest breakthrough in fire protection in the last 100 years. Fire sprinklers are the most effective method of protecting lives and property. Sprinkler systems are now recognized as being so effective they are being made mandatory in many situations.

## FIRE PUMP ROOM

We are Supplier, Exporter (and also Services Provider) of Fire Fighting Pumping Systems ( Fire Fighting Pumps ), Fire Fighting Main Electrical Pumps ( Electric Motor Driven Fire Pumps), Fire Fighting Diesel Engine Pumps ( Fire Fighting Standby Pumps ), Fire Fighting Jockey Pumps, Multistage Fire Fighting Pumps, Multi Outlet Fire Fighting Pumps, Fire Booster Pumps, Mono Block Pumps and our setup is situated in Pune, Mumbai, Ahmednagar, Nagpur ( Maharashtra, India ).

## FIRE ALARM SYSTEMS

### CONVENTIONAL

You can choose conventional fire system with a complete user guide and assistance in installation. Choose the right models of your choice and according to your requirement and get them with installation support. Brothers fire system india pvt. ltd. offers you conventional alarm system – a variety of models and delivered on time in secure way.

### ADDRESSABLE

We have an exclusive range of addressable fire alarm systems and provide you with a complete user guide. Manufacturer's warranty, easy to installation guide, maintenance support, etc., are some of the key services provided by us with the best range of addressable fire alarm systems. Choose the right one of your choice, go through the details and place your order accordingly.

### PA SYSTEM

The public address system is an efficient tool in broadcasting pre defined messages or live announcements throughout the premises or specific location of the premises. Integrated Fire Alarm with Public Address system further simplifies the evacuation operation in delivering evacuation messages / spot announcements that provide a clear view of the problem with necessary action to be taken

## FOAM FLOODING SYSTEM

Foam Flooding is a mechanism of fire fighting using Foam instead of the traditional method of water-based fire hydrant systems. This is commonly used in areas where there are flammable liquid storage, airport hangers, etc. It creates a thick foam blanket on the material under fire, cutting oxygen supply and extinguishing the fire. This can be used only where areas are constrained by bund wall or premises of systems.

## CO2 FLOODING SYSTEM

A fixed installation is designed to displace the oxygen in the protected space and thus extinguish the fire, usually used to fight fires in engine rooms, boiler rooms, pump rooms, and holds. The system normally consists of a series of large CO2 cylinders. The CO2 is supplied from the cylinder manifold to suitable points with diffusing nozzles. Since the effectiveness of fixed CO2 fire fighting system diminishes the longer the fire burns, the speed is essential if CO2 is to be effective.

## SUPPRESSION SYSTEM

Fire Suppression Systems are used to extinguish, control, or, in some cases, entirely prevent fires from spreading or occurring. Fire Suppression Systems have an incredibly large variety of applications, and as such, there are many different types of suppression systems for different applications being used today. Wet type, dry type, gas based, foam based, powder based, and other few agents based fire suppression systems are used as per the type of fire to be suppressed.

## FIRE DOOR

Fire doors are designed to trap flames and smoke while allowing occupants the opportunity to escape. These fire doors are installed at the staircase on each landing. This type of Passive Fire Protection system (PFP) is constructed from materials that are capable of resisting flames and heat as well as stopping smoke from dissipating from one building space into another building and lobbies.

## SAFETY DOOR

Protect your home or business with high-quality fire doors. Explore a wide range of options that combine safety and style to keep your space secure and visually appealing. BROTHERS FIRE SYSTEMS INDIA PVT. LTD. provided a high quality safety doors

## DUCT DOOR

Fire Shaft Doors assist in providing admission to a space that needs some degree of protected entry. Fire Shaft Doors are employed in various applications, including plaster, drywall, floor hatches, fire-rated valve boxes, and security entrance doors. Shaft doors also include entrances for more enormous structures like floor hatches, hatches and walk via access doors. Duct access doors are created to deliver convenient, economic admission to duct elements.

## STAIRCASE PRESSION

For staircase pressurization to work, the stairwell must have a higher pressure than the rest of the building during a fire. The minimum pressure difference is 50 Pa [1]. When the doors open, the staircase's higher pressure forces the smoke back, ensuring that the escape route is free of smoke.

When a fire occurs, a signal will be sent to the fire alarm panel. Then, the fire alarm panel will activate the staircase and lift lobby pressurization fans to turn on and start pressurizing the protected areas.

## CCTV

Brothers Group Pune delivers scalable solutions for security, access, attendance, surveillance, and remote monitoring. With the latest technology trends getting evolved, managing identities and access for the employees is getting more and more tedious job.

## ACCESS CONTROL

All modern organizations need to protect their physical and IP assets. Ensuring the safety of employees and controlling the movement of people with a predefined protocol is a must nowadays. The first step towards securing an organization is getting rid of disintegrated, outdated technologies. Similarly, upgrading to future-ready technologies, that ensure zero errors, is equally important.

## FIRE FIGHTING AUDIT

Fire System Inspection Services contains a particular time check to make sure the fire safety checklist that they aren't discharge. That the tamper seals are in place, that there isn't apparent harm to the unit externally. Most significantly that it's the place it belongs to repair maintenance of fire fighting and protection systems. It can also be a good suggestion to make sure that there's a Fire detector position so it is seen. From an inexpensive distance by anyone occupying the construction or location wherein it's a position. In addition to this month-to-month Fire Fighting maintenance report that's per fire safety code. It should even be correctly service yearly by an so expert license Fire Safety Audit.

## FIRE FIGHTING TRAINING

We provide Fire Fighting Training Services, ( Fire Fighting Fire Live Demonstrations Services ) Fire Fighting Live Demo Services

Most Fire Fighting Training Services focuses on enabling firefighters to perform certain tasks. Before we talk about our training methods, let's first ask ourselves how the brain processes information to learn. Before recruits can perform a task, they need the proper knowledge that enables them to act.

## AMC - COMPRESIVE

Comprehensive AMC ( Annual Maintenance Contract )

The Services include the periodic Preventive Maintenance Services which ensure the safe functioning of all the systems installed. Also it covers the replacement of Spare parts against manufacturing defects except the consumables.
